|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1. CUSTOMER SEGMENT(S)</b> <p>Students and teachers who raise IT support tickets, and IT helpdesk staff who handle those tickets.</p>                                        | <b>6. CUSTOMER CONSTRAINTS</b> <p>Manual classification consumes helpdesk time. Classification must use the configured ServiceNow incident fields and predefined Flow Designer rules.</p>                                                  | <b>5. AVAILABLE SOLUTIONS</b> <p>Users submit incidents through the ServiceNow form. Helpdesk staff can manually review descriptions and assign Category and Subcategory.</p> |
| <b>3. TRIGGERS</b> <p>A new incident is created for Wi-Fi, projector, password/login, or slow/hanging computer issues.</p>                                                      | <b>10. YOUR SOLUTION</b> <p>ServiceNow Flow Designer triggers when an incident is created, checks predefined keywords, updates Category and Subcategory, and sends an email to the Caller. Unmatched tickets remain for manual review.</p> | <b>8. CHANNELS OF BEHAVIOUR — ONLINE</b> <p>ServiceNow incident form and automated email notification.</p>                                                                    |
| <b>4. EMOTIONS: BEFORE / AFTER</b> <p>BEFORE: possible delay or uncertainty from manual classification. AFTER: consistent classification and automatic ticket confirmation.</p> |                                                                                                                                                                                                                                            | <b>8. CHANNELS OF BEHAVIOUR — OFFLINE</b> <p>User reports the IT issue to the school helpdesk and receives support.</p>                                                       |
