

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	04-10-2026
Team ID	SWTID-2026-9856
Project Name	Auto Ticket Classification using flow designer
Maximum Marks	4 Marks

Functional Requirements:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Creation	Capture Caller and Short Description when a new IT ticket is created.
FR-2	Automatic Classification	Evaluate predefined issue keywords and automatically assign Category and Subcategory.
FR-3	Classification Rules	WiFi / Network → Network / Wi-Fi; Projector → Hardware / Projector; Password / Login → Access / Forgot Password; Slow / Hanging → Performance / Slow Computer.
FR-4	Email Notification	Send an automated ticket-creation confirmation email to the caller using the caller email address.
FR-5	Structured Ticket Data	Store ticket number, caller, category, subcategory, short description, description, state and configured reference fields.
FR-6	Maintainability & Deployment	Maintain the Flow Designer logic and use the project update set for configuration transfer.

Following are the functional requirements of the proposed solution.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	ServiceNow Flow Designer uses predefined conditions so ticket classification is automatic after ticket creation.
NFR-2	Security	Relies on ServiceNow platform access controls for ticket and user data; no custom encryption or firewall mechanism is documented.
NFR-3	Reliability	Uses deterministic keyword conditions and configured field values. Validation includes mandatory fields, auto-numbering, category/subcategory and reference fields.
NFR-4	Performance	The flow is triggered when a record is created, reducing manual categorization. No numeric response-time target is specified.
NFR-5	Availability	Runs within the configured ServiceNow instance. No separate load balancer or distributed-server design is documented.
NFR-6	Scalability	Flow Designer logic can be extended with additional conditions, categories and subcategories. No specific capacity figure is specified.
